WOODEX INTERIOR - DIGITAL OPERATIONS

Woodex Interior - Complete

Project Analysis

Woodex Interior - Complete Project Analysis Report

Subject: marketingwoodex-cloud/-marketingwoodex - full-stack website, CMS, PHP admin dashboards, backend API and database **Analysis date:** 13 October 2026 (Asia/Karachi) **Analysed revision:** main @ 782b50b (working tree clean) plus all 12 remote arena/* branches and every release tree that ships inside them **Author:** Arena agent session arena/4150341e-marketingwoodex **Report type:** static, whole-repository analysis - frontend - backend - database - PHP admin - branches - dashboard versions

> **Corrections applied 13 October 2026, during the Phase 1 build.** Three claims in the first issue were wrong and are corrected in place below: 1. **The "five runtime-created tables" (DB-1) were not tables.** wx_allowed, wx_caps, wx_user_perms, wx_action_group and wx_role_groups are PHP **functions** in roles-lib.php; the shipped dump's 20 tables are complete. The real finding - the capability matrix is hardcoded in PHP and unauditable - stands, and migration 001_roles.sql moves it into seeded tables. See the note in Section 7.1. 2. **The action count is 365, not 364.** The Phase 1 alias generator extracts from case labels, $action === comparisons and guard lists; the original count missed the two-letter action me. Both figures are method-dependent, so the number that matters is the generated table: api/v2/aliases.php maps all 365, verified by node tools/gen-aliases.mjs check. 3. **The permission model was described as "runtime-created tables" in two more places**; those lines now read "hardcoded in PHP + _private/security.json grants".

1. Executive Summary

Woodex Interior is a **Lahore design-and-build studio's complete digital operation** built as a PHP-on-Hostinger monolith: a 150-page public website, a no-code page builder, and a 57-route single-page admin dashboard that runs the CRM, quotations, invoicing, live chat, WhatsApp and Telegram automation, SEO tooling, AI assistant and site backups.

The repository is **not one project - it is a development lineage**. Thirteen tracked branches, sixteen release trees and nineteen deployment archives overlap inside a single 314 MB repository. The website itself is mature; the **packaging discipline is not**. The single most important structural fact is that four near-identical admin builds live side by side, and there is no mechanical way for a reader - or a deployer - to tell which one is production from inside the repository alone.

1.1 Headline metrics

Dimension	Measured	Note
Repository size	314 MB - 2,674 tracked files	main tree; 460 MB of Git objects
Public pages	150 HTML documents in frontend-v1	79 content pages + 48 articles + 6 case studies + hubs
Backend action surface	365 distinct server actions	40 PHP files - 6,830 lines
Database	20 MySQL tables - 161 columns	plus 17 Postgres/Supabase tables
Admin dashboard	60 JS modules - 10,502 lines - 57 routes	297 of the 365 actions are reachable from the UI
Serverless stack	39 Netlify/Vercel functions - 3,495 lines	mirrors a parallel Supabase CMS
Branches analysed	13 (1 main + 12 arena)	12 PRs / 6 open, 2 merged
Release trees	16 copies of the site	4 distinct generations of the admin
Root-level reports	24 Markdown + 4 PDF	3,369 lines of prior audit writing

1.2 Verdict

Question	Answer
Is the product functional?	Yes - the v2.1 Pro tree passes static parse, jsdom and headless-Chromium workflow tests
Is the repository production-clean?	No - the packaged recommendations say BLOCK
Why?	Three credentials are published in tracked files; the repository is public; the live topology is unknown
Which branch is the real product?	arena/7f38fddd-marketingwoodex (design/layout batches over woodex-live-p29-v2.1-pro)
Which tree should be deployed?	woodex-live-p29-v2.1-pro/ on arena/7f38fddd-marketingwoodex - after the secrets are rotated

1.3 Top six findings

#	Finding	Severity	Evidence
1	Shared demo password present in 151 tracked files, including a pre-filled login field and a public page	Critical	woodex-audit/08-security-audit .md; admin/index.html:43
2	Telegram bot token in 36 tracked locations, one of them browser-served JavaScript	Critical	admin/admin-tg.js:27; .env:18; config.php:23
3	Repository is public while .env, config.php and _private/*.json are tracked	Critical	gh repo view isPrivate: false
4	Four near-identical admin builds coexist; the plain tree has three pasted-duplicate fragments that break parsing	High	QA-MASTER-REPORT-P29-V 2.1-PRO.md RC-1
5	Non-atomic JSON persistence: file_put_contents(..., LOCK_EX) truncates before locking, so readers can see an empty file	High	api/admin.php:37; forms.php:24
6	Integrations screen reports success without making a single request (22 hard-coded cards, 14 marked connected)	High	admin-settings.js:121

2. Scope, Method and Confidence

Area analysed	Method	Confidence in findings
Frontend	File inventory, HTML/CSS/JS line counts, sitemap and robots parsing, asset weighing	High (static)
Backend	Line-by-line reading of 40 PHP files, action-name extraction, table-usage mapping, dispatcher tracing	High (static)
Database	Schema parsing of 14 SQL files - table, column and index counts computed, not estimated	High (static)
Admin dashboard	60 JS modules parsed for view keys and API calls; NAV table extracted	High (static)
Branches	Git tree diffs (main <-> each branch), commit counts, authors, dates, PR metadata via gh	High (mechanical)
Runtime behaviour	Not executed - no PHP runtime, no MySQL, no live host in the analysis sandbox	N/A - out of scope

Limits. Every number in this report is reproducible from the repository with the commands in Appendix C. Nothing here was verified against a running host, a live database or a browser. Where a finding depends on the live deployment it is labelled as such. Secret values are deliberately **not** reproduced - only file and line references, following the convention already set by woodex-audit/08-security-audit.md.

3. System at a Glance

Layer	Technology	Evidence	State
Web server	Apache / LiteSpeed with .htaccess	frontend-v1/.htaccess (4.3 KB, 80+ rules)	Configured
Language	PHP 8.2 (7.4-compatible shims present)	declare(strict_types=1); str_starts_with polyfills	Modern
Public site	Static HTML + vanilla JS, no bundler	150 HTML files, assets/site.js	Mature
Page builder	Canvas + 51-section library, CodeMirror vendor	builder/ - 10 files, 1.3 MB	Working
Admin dashboard	Vanilla JS SPA, hash routing, 67 script tags	frontend-v1/admin/	Working
Charts / PDF	Chart.js, html2pdf bundle	admin/vendor/ (1.2 MB)	Vendored
Primary database	MySQL / MariaDB on Hostinger	_database/woodex-v20.sql - 20 tables	Present
Secondary database	Postgres via Supabase	supabase/*.sql - 3 migrations	Present
Tertiary store	JSON files under _private/	28 referenced JSON stores	Present
Serverless mirror	Netlify Functions -> Vercel single router	netlify/functions/*.mjs, api/router.mjs	Parallel, unused by the PHP stack
Integrations	Telegram Bot API, WhatsApp Cloud API, Google Analytics 4 + Search Console, Google Sheets, Meta social	*-lib.php modules	Wired
AI	Model Context Protocol endpoint + AI centre + SEO agent	api/mcp.php; mcp-server/server.mjs	Wired
Hosting target	Hostinger shared (cPanel / LiteSpeed)	HOSTINGER-DEPLOYMENT-GUIDE.md	Documented
Automation	Keyed cron worker + polling loops	api/wa-cron.php; admin-chat2.js	Wired

3.1 Three generations of the same product

```
GEN 1 admin/ (root) AdminLTE dashboard, 1 x 306 KB HTML page, 6 JS files
+- Woodex Dashboard v1 - the legacy control panel

GEN 2 wf-admin/ JS admin + Netlify/Supabase functions, 88 HTML, 0 PHP
+- "Woodex Fresh" - the serverless experiment

GEN 3 frontend-v1/ PHP 8 API + MySQL + vanilla-JS SPA admin
+- frontend-v1/admin/ Admin v2.0 - 60 modules, 57 routes (main)
+- p23-live/, woodex-live-p23/ Admin v2.0 P23 builds
+- woodex-live-p29-v2.1/ Admin v2.1 - Obsidian & Cyan theme
+- woodex-live-p29-v2.1-pro/ Admin v2.1 Pro - 64 modules, 59 routes <- source of truth
+- woodex-live-v3/ Admin v3 build (zipped, 2.0 MB)
```

4. Repository Inventory by Module

Module	Files	Size	Role	State
frontend-v1/	642	43 MB	Product - public site + admin + PHP API	Active
assets/	330	25 MB	Images, fonts, stylesheets, JS	Active
content/	147	1.7 MB	CMS page data (73 slugs x blocks + meta)	Active
insights/	49	3.9 MB	Blog hub + 48 articles	Active
projects/	7	116 KB	Portfolio hub + 6 case studies	Active
admin/	24	1.9 MB	Legacy AdminLTE dashboard	Superseded
wf-admin/	389	13 MB	Serverless admin + site copy	Superseded
supabase/	3	32 KB	Postgres migrations	Parallel
netlify/	42	248 KB	39 Netlify/Vercel functions + 3 SQL schemas	Parallel
api/	1	4 KB	Vercel single-function router	Parallel
mcp-server/	5	76 KB	Node MCP server for Claude/Codex/Cursor	Active
builder/	10	1.3 MB	Visual page builder	Active
_templates/	5	89 KB	Page, quote, chat and WhatsApp templates	Active
deploy/	30	139 MB	19 release archives + per-phase folders	Archive
tools/	90	11 MB	30+ build/QA/generator scripts	Active
docs/	6	244 KB	Design docs and sample quotation PDF	Reference
seo-audit/	16	798 KB	SEO/local-search plans and audits	Reference
architecture/	1	44 KB	Architecture page	Content
woodex-vlive-P20/	612	70 MB	P20 frozen release tree	Archive
woodex-master-P22/	12	28 MB	P22 master plan + 2 zips	Archive
woodex-live-p23/	714	74 MB	P23 release tree (largest)	Archive
p22-preview/, p23-live/	634 / 645	43 MB each	Preview trees	Archive
woodex-live-p29-v2.1/, -pro/	642 / 674	43 / 44 MB	P29 v2.1 and v2.1 Pro	Candidate
woodex-live-P23/, woodex-live-v3/	2 / 44	55 / 31 MB	Zip-only distributions	Archive
79 public page directories	79	~7 MB	Standalone landing pages	Active

Module	Files	Size	Role	State
24 root reports	24	450 KB	Master plans and audits	Reference

5. Frontend Module Analysis

5.1 Two generations of website

Attribute	Legacy (repo root)	Current (frontend-v1/)
Pages	86 sitemap URLs	142 sitemap URLs
Page directories	82	79 content + hubs
HTML documents	107	150
Insights articles	20	48
Metadata	Basic	llms.txt (33 KB), AI-crawler allowlist, schema blocks
CMS data	none	content/pages/ - 73 slugs, 146 JSON files
Verdict	Superseded	Active product

5.2 Page inventory (frontend-v1/)

Category	Directories	Examples
Cities (local SEO)	12	lahore, karachi, islamabad, rawalpindi, faisalabad, multan, gujranwala, peshawar, quetta, hyderabad, bahawalpur, sialkot
Residential & interiors	22	interior-design, 1/2/5/10-kanal-house-design, kitchen-design, wardrobe-design, false-ceiling-design, bathroom-design, farmhouse-design, complete-home-redesign
Commercial & fit-out	36	office-fit-out, retail-fit-out, restaurant-interior-design, healthcare-fit-out, pharmacy-fit-out, hotel-interior-design, gym-design, spa-design, showroom-design, shopping-mall-design
Core / conversion	8	about, contact, services, estimator, book-a-visit, projects, insights, privacy
Specialised	1	architecture
Blog articles	48	cost guides, materials, checklists, trends - all Lahore/Pakistan keyword-targeted
Case studies	6	cafe-corner, clinic-fit-out, courtyard-house, office-floor, retail-corner, small-apartment
System pages	7	404, 500, 503, coming-soon, blocks, downloads, index
Total	150 HTML	142 in the sitemap; the remainder are error/system pages

5.3 Page shell, runtime and weight

Item	Size	Purpose
assets/site-p21.css	696 KB	Compiled site stylesheet (P21 baseline)
assets/site.js	36 KB	Menus, forms, chat dock, estimator wiring
assets/book.js + book.css	16 KB	Booking widget
assets/wx-runtime.js	4 KB	Visitor-side runtime (chat, tracking)
assets/theme.css	512 B	Theme token entry point
assets/img/	287 files - 24 MB	Hero, project and article imagery (WebP-first)
assets/fonts/	28 files - 504 KB	Inter (5 weights) + icons
assets/announce.json, data/clients.json	1 KB	Editable announcement bar, client logos
builder/	1.3 MB	Page builder UI: 10 JS modules incl. 51-block library

5.4 SEO, AEO and structured data

Control	State
sitemap.xml	142 URLs (frontend-v1), 86 URLs (legacy root)
robots.txt	Blocks /builder/, /api/, /admin/; explicit allowlist for GPTBot, OAI-SearchBot, ChatGPT-User, ClaudeBot, Claude-SearchBot, PerplexityBot, Google-Extended, Bingbot
llms.txt	33 KB answer-engine brief: company facts, services, pricing posture, contact
Redirect plan	36 rules in .htaccess + redirect-plan.json, including hacked-spam cleanup rules
Schema	Managed schema blocks per page via the SEO manager
SEO tooling	seo-lib.php (Yoast-style per-page scoring), seo-agent-lib.php (AI scan/fix proposals), seo-analyzer.js

5.5 Content model

Store	Path	Count	Written by
Page blocks	content/pages/<slug>/blocks.json	73	Page builder
Page metadata	content/pages/<slug>/meta.json	73	page_meta_save
Page templates	_templates/page-templates-v26.json	1	Admin -> Page templates
Quotation templates	_templates/quotation-templates.json	8 starters	Admin -> Quote templates
Chat bot answers	_templates/chat-bot-answers.json	1	Admin -> Knowledge & Q&A
Client logos	assets/data/clients.json	1	Admin -> Client logos

5.6 Frontend findings

ID	Finding	Severity
FE-1	The 306 KB legacy admin/index.html still ships at repo root alongside the current admin - a second login surface with no owner	High
FE-2	assets/site-p21.css (696 KB) is a single unbundled stylesheet; no critical-CSS split, 14 oversized images flagged by the project's own health scan	Medium
FE-3	143 images lack alt text per the project's own site-health scan (score 69 / 165 findings)	Medium
FE-4	downloads.html is a public page that instructs visitors how to reach /admin/	High

6. Backend Module Analysis

6.1 PHP API surface

Metric	Value
PHP files in frontend-v1/api/	40
Lines of PHP in the API	6,830
Distinct server actions	365
Actions reachable from the admin UI	297
Actions used only by public forms, webhooks, cron or MCP	58
PHP files repo-wide	87 (13,110 lines)
Entry points	admin.php, builder.php, forms.php, chat.php, whatsapp.php, telegram.php, quote-view.php, r404.php, wa-cron.php, mcp.php
Dispatcher pattern	switch ($action) in admin.php -> 25 _lib.php includes -> chained _actions() fallbacks
Auth	X-WX-ADM HMAC session token for admin; X-WX-CSRF builder token; t= HMAC for public quote view; cron key for wa-cron.php
Error envelope	{ok, error} JSON; PDOException is caught and logged, other throws are not

6.2 Module-by-module register

Module	File	Lines	Actions	What it does	Store
Core admin	admin.php	591	36	Auth, users, roles, settings, activity, pages, chrome, global replace, dispatch	MySQL + JSON
Page builder	builder.php	466	27	Canvas save/publish, block library, templates, versioning	MySQL + JSON
Sales (core)	sales-lib.php	331	26	Quotations, invoices, payments, projects, templates	wx_quotes, wx_invoices, wx_projects
Sales (P17)	sales17-lib.php	351	16	Client master, invoice tracker, merge, 360° client view	wx_clients, wx_invoices
Media & system	media-lib.php	339	23	Media library, backups, site health, file manager	wx_settings + FS
Content CMS	content-lib.php	269	33	Blog, portfolio, testimonials, team, FAQs, AI writing, scheduler	JSON + MySQL
CRM	crm-lib.php	266	20	Leads, pipeline, clients, follow-ups, lead->client conversion	wx_leads, wx_clients

Module	File	Lines	Actions	What it does	Store
AI agent bridge	mcp.php	249	19	Model Context Protocol server (Streamable HTTP)	wx_leads, wx_quotes
WhatsApp automation	p18g-lib.php	320	14	Audiences, campaigns, Meta templates, auto flows	JSON + MySQL
Live chat	chat-lib.php	320	15	AI-first chat, staff takeover, lead capture, notifications	wx_chats, wx_chat_msgs
Social planner	social-lib.php	268	10	Facebook/Instagram posts, comments, scheduling	JSON
Telegram	tg-lib.php	225	9	Bot polling/webhook, DMs, link codes, alerts	wx_tg_map, wx_tg_seen
Booking	booking-lib.php	212	6	Site visits, office meetings, online calls, slots	wx_bookings
WhatsApp hub	wahub-lib.php	191	7	Delivery/read/reply analytics, rules, opt-outs	JSON + MySQL
System safe-mode	p18h-lib.php	170	14	Maintenance mode, DB browse/export, file manager	.htaccess + MySQL
SEO agent	seo-agent-lib.php	161	5	Scans pages, proposes and applies AI fixes	JSON
Security	security-lib.php	148	13	Sessions, TOTP 2FA, login alerts, integration settings	wx_activity, JSON
Redirects	redirects-lib.php	144	5	Redirect manager v2 + 404 log	JSON + .htaccess
Notifications	notify-lib.php	144	4	Client status updates (WhatsApp + email, EN/UR)	wx_notify_log
AI agent upgrade	ai-agent-lib.php	139	5	Hand-off reasons, unanswered-question mining, reply drafts	wx_ai_events, wx_ai_unans
Connectors	conn-lib.php	128	7	Connector gallery; secrets write-only; real GitHub token test	JSON
SEO manager	seo-lib.php	109	7	Per-page focus keyphrases, scores, schema, AI suggestions	JSON
Google data	google-data-lib.php	108	4	GA4 + Search Console via service account	JSON + cache
AI centre	ai-center-lib.php	106	3	One place to control AI across web chat, WhatsApp, Telegram	JSON
Estimator & forms	p18e-lib.php	93	5	Rate book, estimator, per-form alerts	wx_leads
Approvals	approvals-lib.php	93	2	Manager changes held for master approval	JSON + MySQL
Phase 8	phase8-lib.php	91	13	Google sign-in, MCP tokens, WhatsApp click stats	wx_users
Roles	roles-lib.php	84	14	Role->capability matrix, per-user permission overrides	wx_users + JSON
Personal profile	p18j-lib.php	63	4	Profile page, extra fields, avatars	JSON + MySQL
Client 360	p19c-lib.php	66	2	One central client record; comms across channels	7 tables
Dashboard	dash-lib.php	65	2	Single role-aware dashboard payload	wx_leads, wx_quotes
Quote view	quote-view.php	61	1	Token-signed client-facing quotation	wx_quotes
Sheets sync	sheets-lib.php	48	4	Google Sheets sync with no API key (Apps Script)	wx_leads
Logos	logos-lib.php	26	2	Client logo strip	assets/data/clients.json
Cron	wa-cron.php	15	1	Queue worker for campaigns and flows	JSON
404 logger	r404.php	11	1	Records missing paths for the redirect manager	JSON

6.3 Public and webhook endpoints

Endpoint	Purpose	Auth
api/forms.php	Public site forms -> leads; serves Turnstile key	Throttled, Turnstile
api/chat.php	Visitor chat: cfg, send, poll	Token per chat
api/whatsapp.php	WhatsApp Cloud API webhook (Meta)	Verify token
api/telegram.php	Telegram bot webhook	Bot secret
api/quote-view.php	Client-facing quotation view	HMAC token
api/mcp.php	MCP server for AI agents	Bearer token
api/r404.php	404 beacon	None (idempotent)
wa-cron.php	Scheduler	Cron key
wx-check.php	Environment diagnostic	Public (read-only report)
wx-install.php	One-time installer (tables + owner account)	Setup guard
wx-demo.php	Demo seeding	Setup guard
router.php	Local PHP dev-server router	cli-server only

6.4 Parallel serverless stack (Netlify -> Vercel)

Group	Functions	Lines	Notes
CMS CRUD (cms-*)	30	~2,900	pages, blog, services, locations, projects, testimonials, team, menu, redirects, media, users, clients, quotations, invoices, quotation templates, estimator leads, enquiries, site visits, analytics, settings, stats, versions, health, backups, save, delete, upload
Helpers (_*)	8	~430	auth, Supabase client, GitHub commit, page render, BOQ, versions, redirects sync, Vercel adapter
Public intake	2	137	enquiry-submit, estimator-submit
Router	api/router.mjs	-	One Vercel function fanning out to all 30 handlers
Total	39 .mjs - 3,495 lines		Fully parallel to the PHP API; not used by the Hostinger build

6.5 Auth, roles and sessions

Stored code	Displayed name	Scope (summary)
owner	Master	Everything; approves manager changes
admin	Manager	All operations except master-only approvals
editor	Developer	Website, builder, content, SEO
sales	Sales	Leads, pipeline, quotations, invoices, clients
support	Support	Inbox, chat, bookings, read-mostly

The UI additionally accepts role *words* (master, superadmin, manager, developer) and canonicalises them - a fix recorded on arena/7f38fddd.

6.6 Backend findings

ID	Finding	Severity
BE-1	jwrite() truncates before acquiring LOCK_EX; jread() takes no lock - a concurrent reader can see an empty file and the API answers "Admin is not set up yet" (HTTP 503)	High
BE-2	bsecret() regenerates the HMAC secret on an empty config read, invalidating every outstanding admin and builder token	High
BE-3	WhatsApp cron takes wa-auto.lock with LOCK_NB and returns {busy:true} silently; admin writers take no lock, so opt-outs can be overwritten	High
BE-4	Only PDOException is caught in the dispatcher; other throws produce blank failures with display_errors=0	Medium
BE-5	Two complete backends (PHP and serverless) implement the same domain model with no shared schema or test - every change must be made twice or one side silently rots	Medium
BE-6	wx-check.php and wx-install.php are shipped in the production tree	Medium

7. Database Module Analysis

7.1 MySQL operational schema - 20 tables, 161 columns

Table	Columns	Keys / indexes	Purpose
wx_users	9	unique email	Accounts, roles, password hashes, 2FA state
wx_activity	7	created_at	Audit trail of admin actions

Table	Columns	Keys / indexes	Purpose
wx_settings	2	PK k	Key/value settings bag
wx_throttle	3	PK ip	Login and form rate limiting
wx_leads	32	4	Enquiries with pipeline, source, value, follow-ups, UTM-ish fields
wx_lead_notes	8	lead_id	Activity notes, calls, outcomes
wx_clients	15	-	Client master records
wx_notify_log	8	t	WhatsApp/email delivery log
wx_wa_seen	2	PK message id	WhatsApp webhook de-duplication
wx_templates	3	unique name	Quotation/page templates
wx_quotes	4	no	Quotations (payload as LONGTEXT JSON)
wx_invoices	4	unique quote_id	Invoices, 1:1 with quotes
wx_projects	2	-	Project records (JSON payload)
wx_chats	20	updated_at	Chat sessions across web, WhatsApp, Telegram
wx_chat_msgs	7	(chat_id, id)	Messages with attachments
wx_bookings	17	d	Site visits, meetings, calls
wx_ai_events	5	t, chat_id	AI hand-off and escalation events
wx_ai_unans	8	status, qkey	Unanswered-question mining
wx_tg_seen	2	PK uid	Telegram update de-duplication
wx_tg_map	3	PK msg_id	Telegram message -> chat mapping

Observations. wx_leads at 32 columns shows the table was extended 15+ times in place, all columns appended after the initial CREATE TABLE - a schema that has outgrown its design. wx_quotes, wx_invoices, wx_projects and wx_templates store their real payload as JSON in a LONGTEXT column, so the database cannot query, index or validate the substance of the business's financial records. The entire permission model - which role may call which action - is **hardcoded in PHP** (roles-lib.php: wx_role_groups(), wx_action_group(), SHARED, EXPAND) and the per-user extra grants live in the JSON side-store _private/security.json. Nothing about authorisation is in the database, so it cannot be inspected, audited or changed without a deploy.

> **Correction (2026-10-13, during Phase 1 build).** An earlier revision of this report stated that five *tables* (wx_allowed, wx_caps, wx_user_perms, wx_action_group, wx_role_groups) were created at runtime and missing from the dump. That was wrong: those five names are **PHP functions** declared in roles-lib.php, not tables. The shipped dump's 20 tables are complete. The real finding is the one stated above - the capability matrix lives in code, not in the database - and migration 001_roles.sql now moves it into seeded tables.

7.2 Postgres / Supabase schema

Migration	Tables
COMPLETE-MIGRATION.sql (190 lines)	enquiries, estimator_leads, activity, page_views, blog_posts, projects, team, media, site_settings
blueprint-migration.sql (138 lines)	clients, site_visits, testimonials, services, locations, page_views, page_versions, redirects, menu_items
woodex-consolidated-migration-2026-09-27.sql (175 lines)	cms_users + the blueprint set (consolidated)
Distinct tables	18, with RLS enabled on public-read tables

7.3 Quotation and invoicing SQL

File	Lines	Contents
netlify/quotations-schema.sql	28	quotations table
netlify/quotation-templates-schema.sql	16	template library
netlify/migration-v2-sections-invoices.sql	79	v2 sections + invoice linkage

7.4 The four-store data problem

Store	Location	Instances	Written by	Risk
MySQL	Hostinger u128159657_woodex	20 tables	PHP API	Primary but not the whole truth
JSON files	_private/*.json	28 referenced stores	PHP API	Non-atomic; blocked only by .htaccess
Postgres	Supabase	18 tables	Netlify/Vercel functions	Parallel, unlinked to MySQL
Page content	content/pages/**, assets/data/*.json	147 files	Builder + admin	Committed to Git

The dashboard reads and writes all four. No migration, reconciliation or single-source rule exists between them, and the JSON layer - the one holding API keys, approvals, maintenance tokens and WhatsApp opt-outs - is protected in production **only** by .htaccess rules whose live effect has not been verified.

7.5 Database findings

ID	Finding	Severity
DB-1	The role/capability matrix is hardcoded in PHP; per-user grants live in _private/security.json (corrected - see note in Section 7.1)	Medium
DB-2	Financial documents stored as unqueryable LONGTEXT JSON	Medium
DB-3	_private/*.json holds secrets and business state reachable through web-server config alone	Critical
DB-4	Three SQL dumps of live data are tracked in Git (the pro tree untracked _private/ records on 2026-10-11, but dumps remain)	High
DB-5	No foreign keys anywhere; referential integrity is enforced only in application code	Medium

8. Admin / Dashboard Module Analysis

8.1 The four admin generations

Generation	Location	Modules	Views	Routes	Lines	Theme	PHP
v1 AdminLTE	admin/ (root)	6 JS	-	Phase 1-3 screens	~100 KB	AdminLTE / Bootstrap	0
v2 "Fresh" serverless	wf-admin/	12 JS	-	88 HTML	2,576	Bootstrap	0
v2.0 production	frontend-v1/admin/	60 JS	56	57	10,502	Custom dark slate #0f172a	40 API files
v2.0 P23	p23-live/, woodex-live-p23/	61 JS	56	57	11,297	Custom	46-47 files

8.2 Admin JS module map (v2.0 on main)

Module	Lines	Views registered	Representative actions
admin-content.js	846	blog, post, portfolio, study, testimonials, team, faqs	cms_list, cms_save, cms_placements, ai_run
admin-sales17.js	571	clients, enquiries, invoices, projects	client_360, inv_track, clients_merge, lead_convert
admin.js	484	dashboard, pages, profile, users, activity, builder, soon	login, me, dashboard, status
admin-sales.js	478	quotes, quote, invoices, invoice, templates, template, projects	inv_save, pay_add, proj_save
admin-chrome.js	405	global	global_chrome, global_menu, chrome_versions
admin-fields.js	369	business, services, cities, fields, citydraft	cms_biz_save, cms_page_kinds, page_new
admin-print17.js	352	-	Quotation/invoice print layouts

Module	Lines	Views registered	Representative actions
admin-media.js	346	media, backups, health	media_upload, backup_run, health_scan
admin-pages.js	309	pages, redirects, global	pages_list, page_meta_save, redirects_save
admin-templates.js	293	pagetpl	cms_tpl_save, cms_page_kinds
admin-hero.js	279	heroes	save, restore, backups
admin-chat.js	262	chat	chat_list, chat_get, chat_lead, notif_poll
admin-print.js	246	-	Classic document prints
admin-crm.js	242	enquiries, pipeline, clients	leads_list, lead_save, lead_note
admin-p18g.js	212	wauto	wag_camp_save, wag_optout, wag_seg_*
admin-library.js	209	library	blocks_list, blocks_sync, blocks_usage
admin-settings.js	203	settings, security	sec_2fa_*, crm_settings_save
admin-seo38.js	182	seo	seo_list, seo_scores
admin-booking.js	179	bookings	bk_list, bk_slots, bk_status
admin-chat2.js	178	-	chat_reply, chat_typing, chat_file
admin-p36.js	170	dashboard, seo, blog	conn_list, gdata_status, tg_get
admin-social.js	165	-	soc_post_save, soc_comment_reply
admin-p19f.js	164	pipeline	lead_save, s17_meta
admin-p18h.js	162	database, files, maintenance	dbx_tables, fm_list, backup_run
36 further modules	~2,900	remainder of the 56 views	-

8.3 Navigation map - 57 routes in 6 groups

Group	Routes	Count
Home	dashboard, approvals	2
Sales	enquiries (Leads), pipeline, bookings, clients, quotations, invoices, transactions, templates, projects	9
Conversations	chat (Inbox), WhatsApp hub (overview & rules, insights, broadcasts & automations, discount offers, connect), telegram, social, updates, AI assistant, knowledge & Q&A, AI report	14
Website	pages, builder, library, global header/footer, heroes, redirects, blog, portfolio, services, cities, page templates, forms, estimator, FAQs, testimonials, logos, team, media, SEO, SEO agent, speed, site health, theme	23
Admin	business info, integrations, users & roles, backups, database, file manager, maintenance, activity log, system check	9
Me	profile, security	2
Total		57 (59 in v2.1 Pro)

8.4 Dashboard content

Widget	Source action	Notes
KPI row	dash_data	Role-aware: CRM/money figures only for owner, admin, sales
Charts	dash_data + Chart.js	Repainted on theme change by uipal.js (v2.1 Pro)
Live counters	appr_count, leads_count, chat_list	Refresh every 60 s; badges on nav items
Targets	dash_target_save	Monthly revenue/lead goals
Google report	gdata_report	GA4 + Search Console summary
Timeline (Gantt)	projects	Date axis with milestones and billing split

8.5 Structural defects in the admin

ID	Defect	Severity
AD-1	Four admin copies exist; three JS files in the plain tree contain pasted duplicate fragments and fail to parse, so VIEWS.settings never registers	Critical if the plain tree is deployed
AD-2	20 view keys are assigned by two or more modules - last script wins; one silent overwrite (VIEWS.approvals replaced by the Security view)	High (fixed pending verification)
AD-3	Navigation tuple has no phase field, so the "coming soon" template prints "Phase undefined"	Low
AD-4	Hash aliases business, connections, integrations exist but are not in NAV; #/integrations runs the dashboard loader	Medium
AD-5	Integrations screen makes zero API calls; 22 hard-coded connector cards, 14 shown as connected, "Save" and "Ping" report success without a request	High
AD-6	Sidebar pinned dark by !important; components bypass theme tokens (65-88 hex literals in some modules)	Medium (addressed in v2.1 Pro)
AD-7	67 unversioned <script> tags in index.html - no cache-busting, load order is the routing contract	Medium

9. Branch-by-Branch Analysis

9.1 Branch register

Branch	Last commit	Author	Commits	Tracked files	vs main (added / modified / removed)	Line delta	Last subject
main	2026-10-08	marketingwoodex-cloud	1 (shallow root)	2,674	-	-	Merge PR #2
arena/01a0f834	2026-10-01	marketingwoodex-cloud	228	1,246	10 / 142 / 1,438	+6,419 / ?161,009	docs: MASTER-PLAN v4.0, bootstrap kit
arena/01a0e87c	2026-10-07	marketingwoodex-cloud	95	800	10 / 88 / 1,884	+2,775 / ?206,392	Add files via upload

arena/9adcf885	2026-10-09	marketingwoodex-cloud	3	2,676	2 / 0 / 0	+853 / 0	Two P23 audit documents
arena/7eefea10	2026-10-09	Arena Agent	2	2,679	5 / 0 / 0	+1,377 / 0	deploy(p23): Hostinger package
arena/83a37223	2026-10-09	marketingwoodex-cloud	7	2,691	17 / 0 / 0	+1,489 / 0	Merge p23 deploy artefacts
arena/5252cdd7	2026-10-11	marketingwoodex-cloud	20	3,502	828 / 64 / 0	+119,242 / ?101	demo-preview: static admin, no PHP
arena/4ba510f0	2026-10-11	marketingwoodex-cloud	163	7,365	4,800 / 63 / 109	+549,502 / ?35,770	Untrack live _private data
arena/8a776c65	2026-10-12	marketingwoodex-cloud	4	2,743	69 / 5 / 0	+15,555 / ?5,266	v2.1 master passkey + auth matrix
arena/7f38fddd	2026-10-12	marketingwoodex-cloud	217	7,540	4,975 / 63 / 109	+572,083 / ?35,770	design(css): legacy colour literals retired

9.2 What each branch actually is

Branch	Character	Unique contribution	Status
01a0f834	Docs and bootstrap era	MASTER-PLAN v4.0, probe tooling, release scripts, repo/staging strategy	Superseded
01a0e87c	First rebuild attempt (PR #1)	PHP-first wf-admin with api/router.php, lib.php, install.php, sql/install.sql	Superseded
01a0ec23	The upload that became main (PR #2, merged)	Full 2,039-file snapshot: frontend-v1, wf-admin, P20/P22 trees	Merged
14ceb9c3	Independent audit (PR #3, merged)	P22.1 verification report and evidence pack	Audit only
dc8cace3	QA fix sweep	Lead-activity action fix, Google card, dead/orphan links, heatmap label, preview stacking; introduces woodex-live-p23/	Superseded
9adcf885	Documentation	Two P23 audits (deep + Arena cross-check)	Docs only
7eefea10	Deployment	Hostinger-ready public_html package and deploy scripts	Artefacts only
83a37223	Merge + deploy	P23 packaging after agent work	Artefacts only
5252cdd7	Demo product	demo-preview/ - the entire admin as a static copy needing no PHP, plus demo data builders and tests	Feature branch
8a776c65	v2.1 release (PR #4)	Preline obsidian/cyan admin, root index.php + config.php + .env, DirectoryIndex, backend auto-config, dual distribution trees, master passkey	Open - production candidate level 1
4ba510f0	v2.1 Pro consolidation (PR #5)	woodex-audit/ pack (25 documents), p22-preview, p23-live, woodex-live-v3 archives; stops tracking live data copies	Open - superseded by #6

Branch	Character	Unique contribution	Status
7f38fddd	Design + layout batches (PR #6)	admin/uipal.js theme-aware charts, single --side-* token set, 343 literal colours -> tokens across 21 files, 57/57 routes with H1 + breadcrumb, KPI rows 4-up	Open - most advanced tip

9.3 Pull request register

PR	Title	Head branch	State	Opened
#1	Woodex rebuild: dashboard admin, CMS page builder, 87-page migration, backend master plan	arena/01a0e87c	OPEN	2026-09-29
#2	Woodex Admin v2 + Master P22.1 Hostinger release	arena/01a0ec23	MERGED	2026-10-07
#3	Audit: independent verification of Woodex Master P22.1 release	arena/14ceb9c3	MERGED	2026-10-07
#4	feat(p29-v2.1): Woodex Admin v2.1 Preline Dark Obsidian & Cyan Release, Master Hostinger Suite & Full QA Sweep	arena/8a776c65	OPEN	2026-10-08
#5	Arena/4ba510f0 marketingwoodex	arena/4ba510f0	OPEN	2026-10-10
#6	Admin design + layout batches: chart theming, colour tokens, header/KPI consistency, asset versioning	arena/7f38fddd	OPEN	2026-10-11

Branch hygiene note. PR #6 records that its base had to be retargeted because "main on this repo is an unrelated history" - PR #6's real base is PR #5's branch. PRs #4, #5 and #6 are therefore a chain, not three independent proposals, and the repository has no branch that cleanly contains everything. Three of the six open PRs (and one that is merged) have never been brought into main, so main is a snapshot from 8 October and **does not contain the current product**.

10. Release, Version and Build Matrix

10.1 Version ladder

Version	Theme / focus	Admin modules	Status
Admin v1 (AdminLTE)	Classic dashboard, Phase 1-3	6 JS, single 306 KB page	Retired
Admin v2 "Fresh"	Serverless + Supabase experiment	12 JS, 88 HTML	Retired
Admin v2.0	Custom dark slate #0f172a, 57 routes	60 JS, 10,502 lines	In main
Admin v2.0 P23	p23 build	61 JS, 11,297 lines	Archive
Admin v2.1	Preline obsidian #050608 + cyan #00b8db, centred frosted sign-in, 8 quote starters, dual-bank routing, Telegram bot, 4-stage bilingual client updates, 147 page sections	62 JS	Candidate (PR #4)
Admin v2.1 Pro	Design + layout batches: theme-aware charts, token unification, 57/57 route headers, KPI layout	64 JS, 62 views, 59 routes, 12,906 lines	Source of truth (PR #6, tree woodex-live-p29-v2.1-pro)
Admin v3	Packaged build	zipped, 2.0 MB	Artefact only
Admin v2.5 Pro	Multi-theme switcher, WebSocket collaboration, AI scope generator, client self-service portal, payment gateways, inventory engine	-	Roadmap (4 weeks)

10.2 Distribution artefacts

Artefact	Size	Target	Contents
woodex-vlive-P20/woodex-v20-master.zip	28 MB	Hostinger	P20 site, 38 PHP files
woodex-master-P22/woodex-master-P22.1.zip	28 MB	Hostinger	P22.1 (audited by PR #3)
woodex-master-P22/woodex-master-P22.2.zip	28 MB	Hostinger	P22.2
woodex-live-P23/woodex-live-P23.zip	28 MB	Hostinger	P23 (build 08:54)
woodex-live-p23/Woodex Live P23.zip	29 MB	Hostinger	P23 rebuild with .env (18:36)
woodex-live-v3/woodex-master-production.zip	28 MB	Hostinger	Production bundle
woodex-live-v3/woodex-admin-v3.zip	2.0 MB	Admin only	v3 admin drop-in
woodex-live-p29-v2.1-pro/Woodex Live P29-v2.1 Pro.zip	29 MB	Hostinger	Current release archive
deploy/woodex-live.zip + p1 ... p14	0.04-7 MB each	Staged	16 incremental deployment archives
deploy/woodex-26.zip, deploy/agentbridge.zip	3.2 MB / 25 KB	Mixed	v26 master, MCP bridge

10.3 Release trees measured against main

Tree	Files	PHP	HTML	JS	Verdict
frontend-v1/	642	48	153	80	Current product, no packaging wrapper
p22-preview/	634	46	152	78	Historic preview
p23-live/	645	46	153	78	Historic preview
woodex-live-p23/	714	47	156	139	Largest tree, includes demo-preview and tests
woodex-live-p29-v2.1/	642	48	153	80	v2.1 plain tree - contains the parse-breaking duplicates
woodex-live-p29-v2.1-pro/	674	54	153	82	Source of truth
woodex live p29-v2.1/ and woodex live p29-v2.1 pro/	642 each	48	153	80	Space-named duplicates of the above
woodex-vlive-P20/site/	612	38	150	77	P20 archive
wf-admin/	389	0	88	12	Retired experiment
admin/	24	0	1	6	Legacy dashboard

11. Quality, Security and Risk

11.1 Findings by severity (repository evidence)

Severity	Open	Fixed pending verification	Source
Critical	8	0	woodex-audit/21-release-readiness.md
High	28	5	woodex-audit/06-defect-verification-matrix.md
Medium / Low	remainder of 60 unique IDs	-	same pack

11.2 Critical findings

ID	Finding	Location
SEC-001	Shared demo password pre-filled in the browser-served login form and substituted when the field is empty	admin/index.html:43, admin/admin.js:235,256
SEC-002	A public page tells visitors how to sign in to /admin/ using the master account	downloads.html:70
SEC-003	Telegram bot token in browser-served JavaScript and in 36 tracked locations	admin/admin-tg.js:27, .env:18, config.php:23
SEC-003b	Secrets tracked: .env, config.php (DB password, IBANs), _private/db.json, _private/admin-db.json (7 password hashes each), _private/system.json, _private/company.json	pro tree, not ignored
SEC-004	Repository is public while the above are tracked	gh repo view -> isPrivate: false
SEC-005	Live validity of the leaked credentials is unknown - the three committed SQL dumps share one distinct bcrypt hash that does not match the published literal	woodex-audit/evidence/
AD-01 / AD-02	Duplicate-fragment parse failures in the plain tree; which tree is deployed is unknown	woodex-live-p29-v2.1/admin/
AD-24 / AD-25	Private-path protection (403/404) unverified on the live host; the JSON store depends on it entirely	_private/*.json

11.3 Release-readiness gates

Gate	Status
A. Scope integrity	Partly met
B. Baseline integrity	Partly met - runtime not exercised
C. Finding quality	Met - 60 unique IDs with evidence labels
D. Fix quality	Partly met - three narrow fixes, no production rollback test
E. Functional/technical verification	Partly met - jsdom + headless Chromium against a stub API pass; live site, real API and PHP runtime not tested
F. Deployment	Blocked - no live access
G. Packaging	Blocked - secrets tracked, QA results not tied to an artifact

Recommendation carried forward from the audit pack: BLOCK.

11.4 Risk register (top risks with remediation)

#	Risk	Likelihood	Impact	Treatment
R1	Leaked credentials used against the live admin or bot	Medium-High	Severe	Rotate password, DB user, Telegram token, app key, maintenance token; then remove the literals
R2	Private JSON store readable over HTTP if .htaccess is not honoured	Medium	Severe	Verify 403 on the live host; move state into MySQL; add a second guard in PHP
R3	The wrong admin tree is deployed (three v2.1 copies exist)	High	High	Ship only woodex-live-p29-v2.1-pro; delete the space-named and plain copies
R4	Non-atomic JSON writes corrupt state under concurrent admin use	Medium	High	Add flock around read-modify-write; make jread fail loudly rather than silently
R5	WhatsApp opt-out list overwritten by a racing cron tick	Medium	High	Take the same lock in admin writers; make "busy" visible in the UI
R6	Two backends drift apart (PHP vs serverless)	High	Medium	Declare PHP-on-Hostinger the only production backend; archive netlify/, api/router.mjs, wf-admin/
R7	main does not contain the current product	Certain	Medium	Merge the #4 -> #5 -> #6 chain into main after R1 is cleared
R8	Repository size and duplication slow every future change	Certain	Medium	Split archives into a releases branch or external storage; keep one tree per generation

12. Recommendations and Roadmap

Horizon	Action	Why	Owner
Immediate (0-48 h)	Rotate the shared password, database user, Telegram token, app key and maintenance token in each provider console	Removes the only Critical finding that is fully in your control	Owner
Immediate	Decide repository visibility (currently public)	Every remaining secret exposure is amplified while public	Owner
Immediate	Remove the login pre-fill/fallback, the /admin/ hint on downloads.html, and untrack .env, config.php, _private/*	Closes SEC-001/002/003 at the source	Owner + agent
Immediate	Add the missing .gitignore rules to the pro tree	Prevents recurrence	Agent
Week 1	Deploy only woodex-live-p29-v2.1-pro; delete the two space-named copies and the plain v2.1 tree	Removes the "which build is live?" failure class	Agent
Week 1	Verify private-path 403/404 on the live host	Closes AD-25	Owner + agent
Week 1	Merge the #4 -> #5 -> #6 chain into main so the repository has one truth	Stops the "wrong build" class of support questions	Owner

Horizon	Action	Why	Owner
Week 2	Make jread/jwrite lock-safe and fail loudly; add a lock to WhatsApp admin writes	Closes BE-1, BE-3	Agent
Week 2	Move API keys, approvals, maintenance tokens and opt-outs from JSON files into MySQL	Removes the availability + secrecy dependency on .htaccess	Agent
Week 2	Declare the PHP stack authoritative and archive netlify/, api/router.mjs, wf-admin/	Ends double maintenance (BE-5)	Owner
Week 3	Version every admin script (?v=<hash>), remove the legacy admin/ dashboard, add a build step	Fixes AD-7, FE-1	Agent
Week 3	Move the capability matrix into seeded tables (db/migrations/001_roles.sql); export a fresh, secret-free dump	Fixes DB-1	Agent
Week 4	Cut a release artifact whose manifest matches the QA run; re-run the readiness gates	Turns "BLOCK" into "conditional"	Agent
Month 2	Execute the v2.5 Pro roadmap only after the above: multi-theme, WebSocket collaboration, AI scope generator, client portal, payment gateways, inventory	The roadmap assumes a clean base	Owner + agent

13. Conclusion

The Woodex project already contains, inside this repository, a **complete and unusually feature-rich** studio operating system: a 150-page sales website, a 57-route admin that covers CRM through invoicing to SEO, working WhatsApp, Telegram, Google and AI integrations, a page builder, a booking system, and an audit pack of 25 documents that is more rigorous than most commercial products carry.

What it does not yet contain is **one answer to the question "what is the product?"** Four admin generations, sixteen release trees, thirteen branches and four overlapping data stores make every statement about the system conditional. The three critical exposures all share the same root cause - values that were convenient during development were never removed from tracked files, and the repository is public.

Fix the four things that multiply: **rotate the credentials, make the repository private, ship one tree, and merge the branch chain into main.** Everything else on the list is already written down, verified and waiting.

Appendix A - Backend action inventory by module

Module	Actions	Module	Actions
admin.php	36	redirects-lib.php	5
